

VISION

Aerohélice aims to be the first choice of its clients and to present a strategic vision focused on profitability, productivity, and competitiveness.

MISSION

We are a company providing "Maintenance, Repair, and Overhaul Services for Propellers and Propeller Pitch Regulators, Complete Wheels (Rims and Tires) and Brake Assemblies, Magnetos, Alternators, Non-Destructive Testing, and Surface Treatments," oriented towards satisfying the needs of our clients, with a view to the continuous improvement of our performance.

VALUES

- Rigour / Quality
- Professionalism
- Valuing our staff
- Respect and rigour in meeting commitments

QUALITY POLICY

AEROHÉLICE has established its Vision, Mission and Values with a view to consolidating and strengthening its corporate culture, thereby becoming a benchmark for quality as a provider of propeller and pitch control maintenance services, non-destructive testing, surface treatment, complete wheels (rims and tyres) and brake blocks.

To this end, the Quality Policy has been defined with the following guidelines:

AEROHÉLICE's quality and safety policy is primarily focused on safety in relation to all services provided, as well as on optimising the 'safety/quality/cost' balance.

To achieve optimal safety standards, AEROHÉLICE consistently applies human factors principles, encouraging all staff to report errors and incidents during all phases of maintenance

The company's culture is underpinned by integration, motivation and mutual recognition among staff, with professional and ongoing training being a constant priority for improving both individual skills and the company's operational capacity.

It is therefore the duty not only of AEROHÉLICE but, above all, of its entire staff to scrupulously comply with procedures, internal quality and safety standards, and all regulations issued by manufacturers and aviation authorities, as well as to cooperate with all audit teams, whether internal or external, so that the final product is reliable, of high quality and safe.

As such, it is responsible for ensuring proper management, taking action to address risks and opportunities, and providing the necessary resources to maintain the standards set out in the Quality Management System. It is also responsible for consistently meeting its customers' expectations, in an unequivocal manner, in terms of value for money.

Working closely with stakeholders, suppliers, public bodies and employees

It is committed to the continuous improvement of the QMS, to meeting applicable requirements, and provides stakeholders with all relevant information.
